

Press release March 1st, 2018

nadicom Gesellschaft für angewandte Mikrobiologie mbH, Marburg, Karlsruhe, Germany

nadicom transfers GMP department to BioChem GmbH on March 1st, 2018

About ten years ago, at nadicom, the microbiological services for the pharmaceutical industry were expanded with the certification as a GMP laboratory. In recent years our business has been built up and further developed in this sector.

nadicom's shareholders have now decided to strategically realign nadicom as a whole. In addition to a stronger focus on our also long-flourishing agricultural sector, this means the separation of the special requirements of a laboratory operating under GMP conditions.

We therefore searched for a reliable partner that also met our client's qualitative requirements and found it with the *BioChem Laboratory for Biological and Chemical Analysis GmbH*, also situated in Karlsruhe. BioChem will not only take over our experienced laboratory and QM team, but also the SOPs that are important for GMP and our database *tree by nadicom* required for further analysis of the laboratory results.

For nadicom, the strategic reorientation also involves relocation to Uhingen (Göppingen district, near Ulm). There, we will move into new offices and laboratories in our own building during this year. In addition to research and development of microorganisms and organic fertilizers for the agricultural sector, our laboratory will continue to be available there for all microbiological and genetic analyses outside GMP.
